Mornings are still hard

People already own more clothes than they wear.
They still waste time deciding, then buy more to feel new.

Closet apps mostly catalog pieces and stop there.
Try on tools mostly sell catalog SKUs, not your own rack.
Human stylists are slow and priced for special occasions.

The daily job is simple and still unmet: open the app, get a look from your stuff, see it on your body, leave the house.

What you open

Wardrobe

Phone photos in
Background cleaned
Items tagged for you
Browse by type / color

Outfits

Daily recommendations
Occasion aware picks
Shuffle when it misses
Save into lookbooks

Try on

Your photo as base
Garment put on you
Keep what works
Skip what does not

How it runs

Mobile	Flutter on Android and iOS
API	FastAPI, Postgres, Firebase login
Tagging	Vision models label uploads
Styling	Rules shortlist, model ranks
Try on	GPU jobs render on your photo
Ops	Admin for users, flags, spend

Where we sit alone

- **Own clothes first**
  Start from your closet, not a brand catalog.
- **Finish on your body**
  A pick is incomplete until you see it on you.
- **One morning habit**
  Upload, outfit, lookbook, preview. Same place.
- **Built for phone photos**
  Messy light and clutter are normal input.
- **Easy to keep paying**
  Pro around the cost of one coffee a week.

Against the usual options

Job	Sugatai	Closet apps	Try on tools	Human stylist
Uses your wardrobe	**Yes**	Yes	Mostly no	Yes
Builds outfits for you	**Yes**	Sometimes	No	Yes
Shows look on your photo	**Yes**	Rare	Yes	No
Ready same morning	**Yes**	Varies	Yes	No
Cost for daily use	**Low**	Low–mid	Free–paid	High
One app for the loop	**Yes**	Partial	Partial	No

Closet apps stop at inventory. Try on tools stop at shopping. We finish the morning decision.

Where NVIDIA fits

Phone photos need vision models that tolerate bad light and clutter.
Try on is an image job: person photo + garment becomes a preview.
That work wants GPUs when many users preview looks at once.

We already route tagging and try on through GPU backed services.
Inception helps raise preview quality and lower cost per render
without pausing product work for infra shopping.

This is compute for the screen people open the app to see.
